SKILLS

Languages:	TypeScript, JavaScript, Python, SQL, C++, HTML/CSS
Core CS:	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Frameworks:	Next.js (App Router), React, Node.js, Express.js, FastAPI, Tailwind CSS, Socket.IO / WebRTC
Databases & Cloud:	PostgreSQL, MongoDB, Supabase, Firebase, Pgvector, AWS, Vercel, Railway, Render, Docker, CI/CD, Linux/Ubuntu (SSH)
AI & Automation:	OpenAI, Anthropic Claude, RAG, Hybrid BM25 + Vector Retrieval, Tesseract.js OCR, Prompt Engineering, n8n, LangGraph
Backend & Security:	REST API Design, Webhooks (HMAC SHA-256, Svix Idempotency), Ed25519 Signing, RBAC, Row-Level Security, Rate Limiting, Edge Middleware, Razorpay, Resend, WhatsApp Business API
Growth & Marketing:	SEO, Email Marketing, Marketing Automation, Attribution Modelling, Funnel Analysis, Cohort Retention, A/B Testing, Figma
Soft Skills:	Team Leadership, Cross-Functional Collaboration, Ownership & Execution, Problem-Solving, Adaptability

EXPERIENCE

- PicaPool** | AI Intern | Founder's Office | Delhi Jul 2025 – Present
- Built an AST-validated, read-only AI data-analyst engine over a 79-table PostgreSQL schema, parsing and validating LLM-generated SQL before execution to remove the injection surface, and deployed a Telegram RAG bot on the analytics layer.
 - Shipped 15+ production internal tools in 8 weeks, including a CRM with role-based access control, a WhatsApp Business API dashboard, campaign attribution and merchant onboarding, owning ideation through implementation with the CTO advising on database design.
 - Engineered an event-fingerprinting and deduplication attribution system across on-ground and digital funnels, replacing download-count reporting with per-channel visibility for spend decisions.
 - Replaced manual reporting with automated daily KPI digests and n8n workflows for prospect enrichment and link tracking; attribution and CRM tooling supported a two-month campus acquisition push reaching 3,000+ students.
- UniLyf** | Product & Growth Intern | Founder's Office | Remote Jan 2026 – May 2026
- Instrumented a demand-validation framework capturing behavioural events across 200+ profiled beta users, running cohort analysis that isolated the specific actions correlated with Day-7 retention.
 - Led a cross-functional team of 6 across growth, content and deployment, owning sprint planning, task allocation and release accountability for a pre-launch product with zero users.
 - Converted the resulting signal set into a phased go-to-market plan and launch feature priority order, and grew a 100+ member insider community as the first testing cohort.
- Freelance** | Web Development & Growth | Delhi Jun 2025 – Feb 2026
- Launched and managed a Shopify storefront for Spraykart LLP, covering store setup and product/catalog configuration, and keeping customer orders flowing without interruption.
 - Ran SEO and lead generation for YourProfessional, a D2C Chartered Accountancy practice, lifting organic search visibility and generating a steady stream of inbound client leads.
 - Delivered additional web development and design work for other D2C clients, spanning Shopify storefronts, UI/UX and site builds, helping each client launch a polished, conversion-ready storefront faster.

PROJECTS

- ProofMart** | Next.js, TypeScript, Supabase, OCR | [GitHub](#) | [Live](#) Aug' 26
- Architected an upload → classify → extract → OCR → verify pipeline with six deterministic markers, each pinning a finding to real page coordinates on an Evidence Rail so every verdict is auditable and reproducible rather than an opaque score.
 - Secured the service with Ed25519-signed PDF dossiers, HMAC SHA-256 webhooks, Supabase Auth with row-level security, and SHA-256-hashed API keys under per-key rate limiting.
 - Released a 3-depth public API (inspect, extract, verify) and a Node CLI across ~9.2k lines of TypeScript, covered by 15 Vitest suites and 4 Playwright E2E specs.
- Gapl** | Next.js, Firebase, Razorpay | [GitHub](#) | [Live](#) Jun' 26

- Designed a multi-model AI gateway with automatic failover across Groq, OpenAI, Anthropic and Gemini, powering resume parsing, ATS scoring and a recruiter-verdict simulator so provider degradation never breaks a user request.
- Layered attribution on Next.js Edge Middleware using shortlink redirects on a decoupled subdomain, click telemetry and 30-day last-touch stamping, making the full email-open to paid-conversion funnel attributable per campaign.
- Integrated Resend webhooks under Svix idempotency and HMAC-verified Razorpay billing, backed by an RBAC admin suite with SPF/DKIM/DMARC health checks, anomaly alerts, one-click refunds and deployed retention cron.

LPU Connect | *React, Node.js, Socket.IO, WebRTC (PeerJS)* | [GitHub](#) | [Live](#)

Mar' 26

- Created a real-time anonymous chat and video-calling platform for university students using React 19, Socket.IO and PeerJS-based WebRTC, with a matchmaking engine pairing users into timed 10-minute sessions and extend-timer requests.
- Implemented a mutual “unlock” friend system with deterministic Socket.IO rooms for persistent direct messaging, live presence tracking, and Google OAuth login backed by an Express/SQLite backend issuing cryptographic session tokens over the socket handshake.
- Hardened the platform with per-route rate limiting, CORS lockdown to verified origins, Helmet security headers and automatic XSS sanitisation; packaged as a Capacitor-based Android app and deployed via Vercel and Render.

TRAINING

Centre for Professional Enhancement, LPU

Jun' 26 – Jul' 26

Advanced Backend Development — Node.js, Express & MongoDB · Grade: A | [Certificate](#)

- Owned the Authentication Service (Firebase token verification, Redis-backed session issuance, HTTP-only cookies) and the Chat Service (conversation/message models, controllers, paginated history) inside a four-service microservices architecture behind a single API gateway.
- Crafted the complete React frontend and UI/UX for the platform, wiring session-aware requests across all four backend services (gateway, auth, chat, agent) through a single public endpoint.
- Completed 55+ hours of instructor-led training covering Express.js, MongoDB/Mongoose, JWT/Bcrypt authentication, middleware design and Postman API testing; capstone extended into LangGraph multi-agent orchestration and Docker containerisation.
